EXECUTIVE SUMMARY

This report contains the main scientific output of the Amsterdam Business School (ABS) for the year 2016, as well as forthcoming refereed articles 2017 (as collected in december 2016-february 2017). This information, included in part B, is preceded by key tables on input and output in these same years, in comparison to previous years, as well as a short summary of the research institute’s history and strategy, and assessment in part A. 2016 has seen a further extension of the quality of our scientific output on societally-relevant research themes, and a widening of our sub disciplinary coverage in the broad field of business, with specific areas of excellence.

This document focuses on the scientific part of our research; more information on the societal impact and relevance can be found in a separate report. Further details about the institute, our researchers and activities is available on our website (see http://abs.uva.nl/research; http://abs.uva.nl/sections-faculty).
PART A. BACKGROUND AND KEY FIGURES

1.1 Background, strategy and research management
ABS is the business school of the Faculty of Economics & Business of the University of Amsterdam (UvA Economics & Business). Our strategy is to conduct and publish internationally recognised research across a broad range of business disciplines. Research is vital to the school and the university and an integral part of the ABS mission to offer an inspiring international learning community to study business and management, where both staff and students can develop their capacities to optimum effect. ABS aims to foster ‘independent minds’ with an impact on international business and society at large by conducting high-quality academic research on innovative and socially relevant themes, and by offering research-based teaching that meets the highest international standards.

We are committed to advancing the understanding of business and its role in society and seek to make research results available to and inform practitioners and wider audiences. The aim to provide research-based teaching does not require that all staff are renowned researchers or that all teaching modules are solely based on research. It does, however, require that students are exposed to relevant academic research in their programmes, and that there are areas of excellence receiving specific attention. For example, ABS has traditionally paid specific attention to corporate governance, broadly defined, from an interdisciplinary business perspective. This embraces examinations and theorisations of the processes of governance at all organisational levels, addresses management practices and leadership roles, highlights their impact on corporate financial and non-financial performance, and examines institutional and behavioural drivers. More recent interdisciplinary foci that we are developing within the school include entrepreneurship and ‘big data for business, science and society’.

The Amsterdam Business School Research Institute (ABS-RI) was created in 2002 to further academic research (i.e. aimed at output in internationally respected journals), as this was then lacking; targeted attention based on specific knowledge of the business field was seen as essential for this purpose. Whilst the finance group and a few individuals in other areas of the school already had an international research and publication record at the time, significant steps were taken in other areas. The main component of our strategy to improve research quality and output in international refereed journals was straightforward: the recruitment (and retention) of high-quality, full-time academics with developed research capacities, also, specifically, in areas of research other than finance. This was coupled with a more consistent policy with respect to part-timers’ research contribution, the reclassification of non-researchers as teachers and the development of the research capability of existing staff. Our faculty is key for realising our strategy, and we seek to attract and retain high-quality scholars by providing an attractive working environment for ambitious research-oriented faculty. ABS seeks to offer good employment conditions (salary, expenses, leave, computers, office space, secretariat, good management) and an excellent academic working environment (regular seminars and visitors, good colleagues, an internationally oriented, inspiring and supportive climate, tenure and promotion opportunities).
The ambition to develop high-quality and relevant academic research has been central to ABS from the beginning and is widely shared across the school. It is supported by a system which allocates research time on the basis of past publication success in high-quality international journals, with those meeting the ABS-RI criteria (for details, see http://abs.uva.nl/research/research-policy/research-policy.html) earning 50% research time (the other half is dedicated to teaching, including thesis supervision and coordination activities). Management duties, if substantial, are deducted from staff members’ teaching time. We encourage faculty to attend and present papers at international conferences and participate in our internal seminar and paper development series as well as the methods workshops offered. We provide individual research accounts to enable faculty members to attend international conferences and/or to purchase specialised literature, small datasets, software and/or hardware or hire a research assistant or pay subjects (and lab costs) in experimental studies. Additional funding is available for specific cases via the budgets of the academic sections and/or ABS-RI, which also pay for subscriptions for the large databases.

1.2 Input
ABS is organised as a matrix. Figure 2 presents the current organigram of the school as a whole, showing the ‘policy- or demand side’ of the matrix (the programmes and institutes), whereas table 1 gives an overview of the research time within the academic sections (the supply side) in full-time equivalent (fte). It is categorized per year and per academic section, and within that, per staff category. Since 2014, ABS has six academic sections (in preceding years, there were four). Sections are capacity units responsible for sub disciplinary teaching and for all personnel matters of the concomitant faculty and PhD students (salaried junior employees in the Dutch system).
It should be noted that there are some additional ABS researchers not included in the Tables as they do not have a formal appointment at our university (or only a 0.0 fte arrangement, and thus they are not visible in the Tables). They include so-called external PhD students, usually practitioners with several years of experience who pursue their research alongside jobs in business, governmental or non-governmental organisations, or (applied) research or teaching institutions. Until recently, we had only a small number of successful external PhD students, but the past few years have seen an increased interest in starting such trajectories, partly as a result of intensified efforts for external grant income, which led to various forms of co-funding. Of the more than 50 PhD projects currently on the books, almost half does not entail funding that goes through our university accounts. Of these, about 10 full-time or part-time projects are funded from a research grant (foreign scholarship councils, NWO) or, less often, by the employer; the rest entails partial or no funding. Furthermore, there are also seven professors affiliated to us at no cost as they are on the payroll of firms, international organisations or research institutions other than ABS.

Tables 1 – 5 show the strong growth in researchers in the previous years, as well as continued diversity in terms of gender and nationality.

</table>
The Tables above show that research FTE have increased considerably in the past few years. Especially in 2013 and 2014, most of the FTE growth took place at the junior level (see Table 1), leading to a relative decline in the junior-senior faculty ratio. Most recently, we have been able to redress this trend, by attracting several senior researchers. We have also been able to attract quite some non-Dutch researchers from a variety of countries. By the end of 2015, 50% of our research staff was non-Dutch, representing 24 foreign nationalities. All researchers, including the Dutch, have an international orientation, as they engage in international conversations, collaborate with international colleagues and co-authors, and obviously publish in international journals (see below). While recruiting high-quality faculty within the limits set by the Dutch salary system is not easy, continuous attention, patience and concerted efforts over a longer period of time do pay off. Locational advantages certainly play a role, but this is reinforced by the ambition and atmosphere within a relatively young business school, and the support that we seek to offer. Although it is inevitable that some researchers leave ABS for a variety of reasons (personal, professional, financial), we hope they will continue to be ‘ambassadors’ in the sense of appreciating their time at the school. Current nationalities total 27: Albanian, American, Austrian, Belgian, Brazilian, Bulgarian, Canadian, Chinese, Dutch, German, Filippino, Finnish, French, Greek, Hungarian, Irish, Israeli, Italian, Japanese, Lets, Lithuanian, Polish, Portugese, Romanian, Serbian, Turkish and Swiss.
1.3 Output

The tables 6 and 7 give an overview of the output in 2016, focused on refereed journal articles and dissertations. It shows a stable output in terms of refereed journal articles in total, but within this category, a clear growth in the number of international refereed publications, as exemplified by A*, A and B journals. Table 9 shows a strong presence in the editorial boards of international journals and table 10 gives an overview of seminar organised at ABS in 2016, showing the active research culture at the school. Similar to the overall development in research fte over the years, where we see that large steps have been taken to develop non-finance areas, the key output underlines the same broadening, with a large share of the A and B articles in management and, to a lesser extent, marketing outlets. The broadening of our research over the years is becoming visible in sub disciplinary assessments. A bibliometric exploration of our university’s research output registration, commissioned to the Centre for Science and Technology Studies (CWTS), which became available in June 2015, considered performance in Web of Science subject categories. It measured a Ptop10 indicator of 27% for management, 26% for business and 12% for business-finance, meaning that the actual number of top 10% publications is respectively 2.7, 2.6 and 1.2 times higher than could be expected based on the field and publication year. For our Corporate Governance focal research area, Ptop10 was also 27%.

Part B give a detailed listing of all journal publications, and allows for a more in-depth insight of specific topics, authors and main ABS researchers involved, as well as grant applications, honours and awards. This is just part of the many activities undertaken by our faculty, of which some are less visible in direct output. A clear example is editorial activity of journals, i.e. associate/senior editorships and board memberships, which is taking place across a range of subdisciplines, representing not only signs of recognition by peers and of academic reputation, but also contributions to the ‘common good’ (see p. 36 for editorial board memberships). This also applies to ad-hoc reviewing for conferences and journals in which our researchers are commonly involved.

Note: Most recent results are printed in bold. * Meaning of scores: 5 = excellent; 4 = very good; 3 = good; 2 = satisfactory; 1 = unsatisfactory. ** The Finance programme was not part of the 2013 interim assessment as this was tied to a business research master programme application for the non-finance subdisciplines. HRM/OB was renamed to Leadership & Management in 2016.

1.4 Assessment

For the 2016 QANU review, a new evaluation protocol applied, which has been developed in recent years. It has a different scoring system on partly different (and less) criteria, and with an assessment taking place for the research institute as a whole, not separate programmes anymore. This means that we have also stopped reporting on individual programmes that used to mirror academic sections. The move towards an institute-level approach makes sense; we have always seen research programmes as a primarily pragmatic tool to collect, evaluate and present research. Links between researchers from different programmes/sections on specific interdisciplinary themes have existed within ABS, blurring the boundaries between ‘subdisciplinary’ programmes; this also applied, e.g., to our corporate governance research priority area which incorporates researchers from multiple sections. Moreover, the ongoing growth of ABS necessitated splitting up growing sections (see Table 1), but not necessarily starting new full research programmes for each new section. An institute-level approach also supersedes concerns raised about viability in relation to the exploration of a potential split as happened in the case of ISM and E&I, and negatively affected the ISM score on this criterion in the 2014 assessment. Table 8 show that ABS research has come on par with other high quality institutions in The Netherlands.

An institute-level assessment was given by the EFMD European Quality Improvement System (EQUIS). We quote from its 2014 peer review report, which noted as some of the areas of excellence: “The School’s total commitment to research and development and the research culture as well as the quality and quantity of research output of faculty are truly excellent and the School needs to be congratulated on these”; “The related faculty management and work allocation systems that reinforce not only the research oriented culture but a culture of research-led learning for the students”; and “The School has done an excellent job of incorporating ethics, social responsibility and sustainability into many of its features and its cultural dimensions. These are highly noticeable in faculty research, in programmes, in students’ experiences and interests, and are embedded in the School’s mission, vision and strategy”. It also expressed its view that “the research quality is strong and will continue to remain so given the faculty, the systems and ABS’s emphasis on this area. It is also noted that research in governance and sustainability (a priority area for the School) is very well developed across all disciplines”. 

Note: The most recent assessment was done at the level of the institute and had four categories in terms of scores: excellent/world leading; very good; good; unsatisfactory.
In the official ratification letter of the AACSB accreditation of UvA Economics & Business in March 2016, as the first of three points indicating the strengths of the schools, the research capabilities were mentioned: “research outputs of some faculty are of world-class quality. This includes regular publications in elite journals, presentations at international meetings and influential input in public debates”.
