EXECUTIVE SUMMARY

This report contains the main scientific output of the Amsterdam Business School (ABS) for the year 2022, as well as forthcoming refereed articles 2023 (as collected in December 2022-February 2023). This information, included in the list of output, is preceded by key tables on input and output in these same years. Most tables and figures will speak for themselves and where no further explanation is required, none is given. Overall, the growth of faculty has continued in 2022. This has also clearly influenced our research output with a steep increase in top publications (see Figure 1). We have again invested in PhD students: many new PhD projects have started within the Outside-in scheme, aligning our research with the UN sustainable development goals.

Further details about the institute, our researchers and activities is available on our website.

Figure 3 – Information of Altmetric Rankings

Quotes from assessment committee reports

The stated ambition "quality over quantity", giving priority to top-publications, is consistent with the perceived position. The research productivity is strongly incentivised through the faculty workload management system, allocating research time based on past realised productivity in terms of published papers. The faculty counts among its ranks a number of well cited and internationally influential researchers, in both economics and management. Overall, the PRT salutes the continued excellence pursued by the researchers in the School, a mark of distinction well integrated in a large successful international research university. Drawing on the solid basis in quantitative analysis and social sciences, the focus shift to societal impact and digital transformation has the potential of both increasing impact and unleashing new methodological advances.
EQUIS PEER REVIEW TEAM REPORT February 2021

The research strategy is mainly determined by two very strong research institutes: Amsterdam School of Business Research Institute (ABS-RI) and …The research strategy has also a clear focus on high-quality publications with a focus in specific research areas (… Corporate Governance for ABS; Risk and Macro-Finance at FEB-level).

UvA-FEB also seems to be well-embedded in its societal context. Several professors are very visible in the public debate on (business) economics issues. To increase its interaction with practitioners and government UvA-FEB did set up in 2016 the "Co-creation Series", which helps faculty in the operationalization and valorization activities. Within the Co-creation Series academics, practitioners and governmental agencies meet in both formal and informal sessions to discuss specific challenge they face, share best-practices or frameworks, and present research findings.

Research conducted on entrepreneurship and innovation within ABS also finds its way to entrepreneurs and start-up companies through the Amsterdam Centre of Entrepreneurship (ACE). ABS is also a partner of the Amsterdam Academic Alliance-sponsored Amsterdam Data Science initiative, which develops world-class data science talent and technology within the Amsterdam region. UvA-FEB has also received in the recent years a large number of company-sponsored PhD-projects in data science.
AACSB CONTINUOUS IMPROVEMENT REVIEW PEER REVIEW TEAM REPORT November 2020

Most recent national research assessment evaluation

As part of the regular six-year assessment cycle for research, seven faculties of economics and business of Dutch universities were assessed again in a joint effort by an international committee in September 2021. This assessment included Economics and Business (EB) at UvA. The committee received a self-assessment report from each of the units (for EB this included both ABS and ASE) and was asked to assess all units based on the Strategy Evaluation Protocol 2021- 2027 (SEP). The main assessment criteria were: quality of research, relevance to society, and viability. Due to Covid the meetings took place online. The main area's for improvement were identified as:

1) enhancing inter- and intrafaculty collaboration
2) increase research quality and recognition
3) address HR issues such as retention and diversity and
4) increase societal relevance/valorisation.

A summary of the review, as taken from the faculty reaction to the UvA board is given here.

Despite the drawbacks of not being able to meet in person, we believe they have been able to get a clear and encompassing view of the most important challenges facing our faculty. We are pleased to see that the committee has noticed that at our faculty 'research quality is clearly a top priority' (p. 39) and that research quality and output have kept improving in the period under review. We also take great pride from the praise of our approach to mainly use the international job market for recruiting (p. 41). Although improvements are always possible and ongoing, the committee finds that many basic support systems are in place (e.g. for grant support, valorization) and it also believes both schools "are very strong in their capacity to train and prepare future academic and industry personnel" (p. 45). Furthermore, the committee also states that in principle "both schools and faculty have an understanding of what can and must be done better and thus has confidence in a bright future for both schools" (p. 44).

Suggestions for improvement were welcomed and have been and will be discussed in board meetings.

Table 9.1 – PhD placement

2022 graduates	Position (2022,December)	Organisation
Stofberg,Nicole	Lector	The Hague University of Applied Sciences

SECTION 4 - RESEARCH DATA MANAGEMENT

In 2019 ABS released its protocol for research data management. The protocol was subsequently slightly amended and adopted by the Faculty Board after a review by the Works Council and came into official effect on 1 March 2020. In line with UvA guidelines, all researchers are expected to adhere to the protocol. This document includes information on research the data management plan, what data is collected, how it is collected, and how data is stored. It can be found here: https://abs.uva.nl/research/research-policy/research-policy.html In 2022 the system/website that was internally develop to handle request for ethical review (EBEC web form), and from 2019 onwards also included RDM and privacy questions, was replaced by a university wide tool called RMS (research management services).

Although only one data set from one of the 2020 academic publications had been put in Figshare in March 2021, most have now been stored after a reminder by the Research Institute, we expect a similar development for the 2021 output.

Table set 11 – Figshare use and RDM/Ethics committee requests

Ethics committee requests & RDM				2022
New RMS system		Previous EBEC web-form		
UvA-EB total projects	183	UvA-EB total projects		854
